VR EXTENSION for Direct Mount Vacuum Regulators

Bulletin: 804

Part No. 6303.00

**Optional Ton Mount V-R Extension
Model No. 6303.00**

The VR Extension from Halogen Valve Systems, Inc. is primarily used when an Eclipse actuator is to be mounted to a tank valve along with a Wallace & Tiernan Direct Mount Vacuum Regulator.

By inserting the VR Extension between the yoke and the drip leg, sufficient clearance is then provided to allow both the Eclipse actuator and the vacuum regulator to be mounted to the same ton container valve.
